Certificate of Conformance -- FIPS Security Labels

The Federal Information Processing Standards (FIPS140-1, FIPS140-2, etc) require security labels with a unique serial number, an anti-counterfeiting feature and a robust tamper evident feature.

NovaVision's Holo-Guard labels are designed to meet these specifications and include these features and benefits:

- Holo-Guard labels feature a stock hologram image to combat counterfeiting.
- A high-strength adhesive bonds to most surfaces and resists attack from chemicals or extreme temperatures.
- A "high-residue" construction enhances the tamper evident security.
- The unique serial number (and optional custom imprint) is protected with a clear top lamination for added durability and security.

Holo-Guard security labels are suitable for indoor applications for at least 5 years and outdoor applications for at least 2 years.

The adhesive is compatible with most surfaces, including bare metal, painted metal, glass, wood, and most plastics. For optimum adhesion, surfaces may require cleaning with alcohol to remove surface contaminants. For added convenience, we offer optional alcohol cleaning kits.

The minimum application temperature is +50F. For colder ambient temperatures, apply supplemental heat to the surface. Supplemental heat can also be used to quickly improve adhesion onto any type surface.

Holo-Guard labels are also available in custom sizes, shapes, and/or with custom hologram images.

Sincerely,

Michael Messmer
VP, General Manager
