

DURABLE LABELS

Harsh environments, gas spills, extreme sun exposure, and hard to stick surfaces are all driving forces behind the necessity of durable labels. Working closely with manufacturing and industrial companies, we know what works best when you need a custom durable label that lasts.

Product Identification Labels

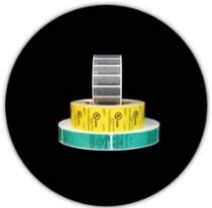

From wet-dry vacs to lawnmowers, we manufacture labels that withstand the test of time. Knowing whether a vinyl label with permanent adhesive or a polyester label with auto grade ink works best in specific environments is why industrial customers trust us as their go-to-resource for custom product identification labels.

Safety & Warning Labels

By informing workers, consumers and operators about possible dangers associated with operating tools and machinery through applied safety and warning labels, serious injuries can be prevented.

With our expedited processes and rush to order capabilities, we provide a wide range of durable labels including Prop 65, Safety, Warning, Danger, and Electrical Labels.

UL/cUL Labels

We are a UL/cUL authorized label supplier, which permits us to print the UL/cUL logos. We have a large selection of UL 969 PGDQ2, PGDQ8, PGJ12 and PGJ18 approved label constructions. UL 969 is the most referenced standard for label durability and assures our label constructions (base stocks, inks, overlaminates) have undergone rigorous independent testing before any printing occurs.

Lithium Battery Labels

Battery labels must be manufactured with accuracy and precise printing guidelines to adhere properly to their varying sizes and shapes. The labels must also be as durable as the batteries themselves providing extended lengths of use and possible exposure to harsh elements.

Variable Data Labels

Durable variable data labels offer numerous advantageous capabilities when determining what to print on your custom label. Variable data labels range from serialization to bar code variations to varying imagery used for marketing campaigns. Implementing these possibilities allows manufacturers ease of traceability, quality control should recalls occur, as well as inventory management.
