

## SECURITY LABELS

**Tamper evident seals** and **security labels** are often used to detect tampering of containers and access points. When removed, the tamper evident seal will self-destruct to indicate that the seal has been broken.

### Low-Residue Labels

When removed, the [low-residue label](#) will self-destruct to indicate that the security seal has been broken. Our low-residue labels leave a minimal amount of adhesive residue on the surface when removed, which minimizes clean-up on reusable containers or surfaces.

Low-residue labels are not recommended for materials with low surface strength such as recycled cardboard, pressed cardboard, or pallet film. When removed from these surfaces the adhesive will usually tear the surface and not activate the tamper evident feature. For these applications, we recommend a high-residue security sticker

### High-Residue Labels

[High-residue labels](#) offer the highest level of security. The tamper evident feature is more sensitive. Also, they are more versatile because they are effective on a wide range of surfaces and materials. However, if the container or surface is reusable, consult the ease of cleaning up the adhesive residue.

### Non-Residue Labels

Our [non-residue security labels](#) provide both security and the added convenience to avoid leaving adhesive residue. After application to the surface, these security labels will tamper when removed, which exposes the hidden message "OPENED VOID" on the label. Our non-residue labels are available in stock and in custom versions.

Our security labels are designed to show signs of tamper evidence immediately when removed from the applied surface. Our non-residue labels are suitable for both indoor and outdoor applications.

### Frangible Seals

[Frangible seals](#) are typically lower cost and are often used on higher volume applications including retail products, medications, confidential documents, etc. Frangible paper tears easily when removed. After application, the paper seal can be removed, but it is designed to tear into multiple pieces or delaminate. Frangible paper seals are available in stock and custom versions.

### Custom Security Labels

Because we are the manufacturer of our tapes and labels, we provide **customization** options for all of our labels to match your security and budget requirements. We can customize label color, shape, size, imprint, residue, and serialization. Custom security labels offer the highest level of security.
